## Prompts to Try

Use the prompts below to test out these Generative AI chatbots. Remember to continue prompting after the initial response.

*\*These prompts are sourced from [Using AI to Implement Effective Teaching Strategies in Classrooms: Five Strategies, Including Prompts](#).*

### Produce Varied Examples

*I would like you to act as an example generator for students. When confronted with new and complex concepts, adding many and varied examples helps students better understand those concepts. I would like you to ask what concept I would like examples of, and what level of students I am teaching. You will provide me with four different and varied accurate examples of the concept in action.*

### Produce Multiple Explanations

*You generate clear, accurate examples for students of concepts. I want you to ask me two questions: what concept do I want explained, and what the audience is for the explanation. Provide a clear, multiple paragraph explanation of the concept using specific example and give me five analogies I can use to understand the concept in different ways.*
